# Explanations and levels of abstraction

## Motivation

Ability to provide an explanation is increasingly important in various areas of (computer) science:

1. Data integration in systems biology<sup>1</sup>
2. Autonomous decision making<sup>2</sup>
3. Blame analysis<sup>3</sup>
4. Artificial intelligence<sup>4</sup>

Choosing the right level of abstraction of paramount importance in all of the above, e.g.

1. Functional vs. mechanistic level
2. What level of detail is wanted, who the explanation is given to etc.

# Layers of abstraction

Image source: Openclipart

# Structure of explanations

## Motivation for formalism

- ▶ Want to take layers of abstraction into account
- ▶ Want to go easily from one context/theory to another
- ▶ What is being explained is seen as a *process*
- ▶ Processes and their explanations should *compose*
- ▶ Modularity: an explanation of a sub-process should be seen as a partial explanation of the larger process

# Layered props

$$\frac{\sigma \in \Sigma \setminus \Sigma^i}{\sigma : (\text{ar}(\sigma) \mid \text{coar}(\sigma))} \quad \frac{\sigma \in \Sigma^i \quad \text{ar}(\sigma) = \omega, \alpha \quad \text{coar}(\sigma) = \omega, \beta}{\omega \alpha \begin{array}{|c|} \hline \sigma \\ \hline \end{array} \beta \omega : (\omega, \alpha \mid \omega, \beta)} \quad \frac{}{\omega \alpha \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \alpha \omega : (\omega, \alpha \mid \omega, \alpha)}$$

$$\frac{}{\omega \alpha \begin{array}{|c|} \hline \diagdown \quad \diagup \\ \hline \end{array} \beta \tau : (\omega, \alpha; \tau, \beta \mid \tau, \beta; \omega, \alpha)} \quad \frac{}{\phantom{\omega \alpha} \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} : (\varepsilon \mid \varepsilon)} \quad \frac{}{\varepsilon \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \varepsilon \omega : (\varepsilon \mid \omega, \varepsilon)} \quad \frac{}{\omega \varepsilon \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \varepsilon : (\omega, \varepsilon \mid \varepsilon)}$$

$$\frac{}{\omega \alpha \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \omega \beta \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \alpha \beta : (\omega, \alpha; \omega, \beta \mid \omega, \alpha \beta)} \quad \frac{}{\omega \alpha \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \omega \beta \begin{array}{|c|} \hline \phantom{\sigma} \\ \hline \end{array} \alpha \beta : (\omega, \alpha \beta \mid \omega, \alpha; \omega, \beta)}$$

$$\frac{}{\omega \begin{array}{|c|c|} \hline \alpha & f\alpha \\ \hline \end{array} \tau : (\omega, \alpha \mid \tau, f\alpha)} \quad \frac{}{\tau \begin{array}{|c|c|} \hline f\alpha & \alpha \\ \hline \end{array} \omega : (\tau, f\alpha \mid \omega, \alpha)}$$

$$\frac{x : (t \mid s) \quad y : (s \mid u)}{x, y : (t, u)} \quad \frac{x : (\omega, \alpha \mid \omega, \gamma) \quad y : (\omega, \beta \mid \omega, \delta)}{x \otimes_{\omega} y : (\omega, \alpha \beta \mid \omega, \gamma \delta)} \quad \frac{x : (t \mid s) \quad y : (u \mid w)}{x \otimes y : (t; u \mid s; w)}$$

# Example: glucose phosphorylation

after Jean Krivine

We wish to explain the chemical reaction rule:

using the interaction between parts of molecules:

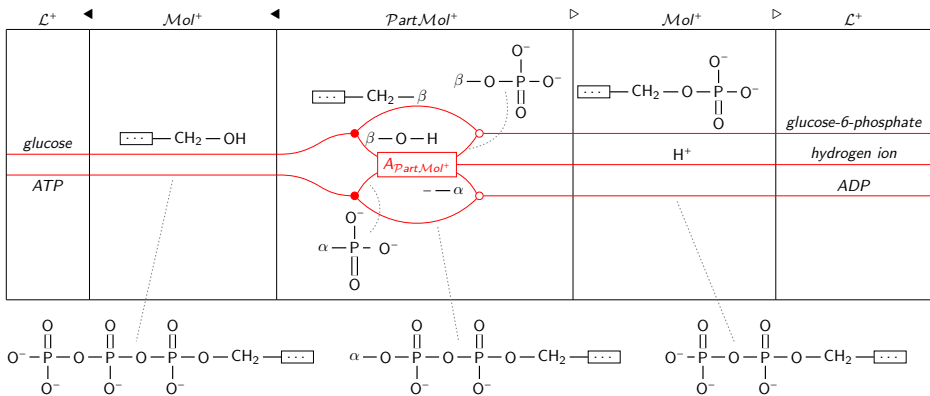

We draw this as an internal box:

in the layered prop.

# Example: glucose phosphorylation

after Jean Krivine

# Example: electrical circuits

after Boisseau and Sobociński

We wish to explain the rule for the sequential composition of resistors:

# Example: electrical circuits

after Boisseau and Sobociński

# Example: Calculus of Communicating Systems

after Jean Krivine

We wish to explain the rewrite rule

$$x.0 \parallel (y.0 \parallel \bar{x}.0) \rightarrow 0 \parallel (y.0 \parallel 0).$$

It has a derivation:

which can be turned into an explanation using the translation:

# Example: Calculus of Communicating Systems

after Jean Krivine

There is also a counterfactual explanation:

# Explanations

## Formal definitions

### Definition (Explanation of a 1-cell)

Let  $\epsilon$  and  $\sigma$  be parallel 1-cells in a layered prop. We say that  $\epsilon$  is an *explanation* of  $\sigma$  if

1.  $\sigma$  is an internal morphism contained in some category  $\omega \in \Omega$ ,
2. every internal non-identity morphism of  $\epsilon$  is contained in some category  $\omega'$  such that  $\omega' < \omega$  in the partial order of  $\Omega$ ,
3. there is either a 2-cell  $\epsilon \rightarrow \sigma$  or a 2-cell  $\sigma \rightarrow \epsilon$ .

# Explanations

## Formal definitions

### Definition (Explanation of a 2-cell)

Let  $\eta$  and  $\mu$  be parallel 2-cells in a layered prop. We say that  $\eta$  is an *explanation* of  $\mu$  if

1.  $\mu$  is generated by an equality of morphisms in some category  $\omega \in \Omega$ ,
2.  $\eta$  can be constructed using the generating 2-cells of a layered prop and the 2-cells that come from an equality of morphisms in those categories  $\omega'$  for which  $\omega' < \omega$  in the partial order of  $\Omega$ .

### Definition (Window, cowindow)

A *window* is a morphism in a layered prop of the form on the left below. Dually, a *cowindow* is a morphism in a layered prop of the form on the right below.

## Future directions

- ▶ Data integration and hypothesis generation
- ▶ Unsharp compartments in biology

- ▶ Formalising scientific explanations
- ▶ Counterfactual reasoning
- ▶ Layered props as a Grothendieck construction
- ▶ Other ideas welcome!
